**FEATURES**

- ◆ Compatible with most computer video resolutions
- ◆ Draws and points over video to easily direct audience attention
- ◆ Control Pointmaker or PC from digitizing tablet
- ◆ Standard Pointmaker Features:
 - Freehand drawing
 - 12 pointer types
 - 3 line widths
 - 7 colors

PRODUCT OVERVIEW

DRAW & POINT ON LIVE COMPUTER IMAGES. The Pointmaker PVI-46 notebook marker is an excellent match for "portable" presentations: use it with a laptop for drawing over images in attention-getting colors, directing audience attention where it's needed to make your point. It quickly and easily connects between a computer and monitor (or LCD projector), enabling non-destructive annotation of every image you project, whether still or moving.

UNDO OR ERASE. For those who make mistakes, the PVI-46 allows you to select one of two different recovery modes: the undo mode allows you to remove each of your markings in the reverse order in which you made them, while the erase mode lets you erase any part of any markings you have made.

MARK OVER STILL OR MOVING IMAGES. Because the PVI-46 actually marks on a clear overlay above your images, you can mark over virtually any images, even live feeds and animations, without affecting them. The unit

even stores up to 25 marker overlays, ready to be recalled when needed.

FLEXIBLE CONTROL. There are numerous options for marking with and controlling this Pointmaker. With the PVI-46DU, we include a USB digitizing tablet which can also double as a mouse for the PC. Adding the optional keyboard gives you more marking features and the ability to type text on images. Two user-assignable COMM ports give you the flexibility of adding other popular markers, including touch screens and mouse devices.

POINTMAKER / PC TEAMWORK.

With the Pointmaker PVI-PC20 software, you can print and save the displayed PC images along with the annotations you have made. The software also allows you to assign up to 8 icons on the digitizing tablet template for controlling PC commands, such as minimizing or maximizing an application window, restoring the current window, assigning a function key, etc.
